**PROSEP RECEIVES DELOITTE TECHNOLOGY GREEN 15 AWARD
- Technology helps oil and gas companies create pure oil, gas and water -**

MONTREAL, QUEBEC – September 25, 2008 - ProSep Inc. (TSX: PRP), dedicated to providing process solutions to the oil and gas industry, announced today that it has received a Deloitte Technology Green 15 Award in recognition of its suite of technology solutions that deliver improved efficiencies and reduced costs to upstream production activities while addressing environmental concerns.

“We are especially proud that ProSep has been singled out for delivering practical business applications that also deliver benefits to the environment,” said Jacques L. Drouin. “This industry validation, coupled with the ongoing feedback from customers, such as Saudi Aramco, Petro-Canada and Statoil, provides further evidence of the potential of our technologies in meeting industry requirements, particularly as production wells mature and the volume of produced water increases.”

Through its operations in Houston, Norway, Bahrain and Malaysia, ProSep provides technologies that separate oil, gas and water during onshore and offshore production activities. While creating pure oil, gas and water, ProSep’s process solutions also enable oil and gas companies to discharge produced water effectively, reduce consumption of fresh water and maximize the absorption of oil and gas particles from re-entering the environment.

“Companies such as ProSep are creating technologies that have both a significant environmental impact and demonstrate a compelling return on investment. In doing so, they are helping position Canada as a global leader in the development of commercially-viable green technology,” said John Ruffolo, National Leader, Technology, Media & Telecommunications Industry Group, Deloitte.

About the Deloitte Technology Green 15 Award

The Technology Green 15 recognizes Canada’s leading GreenTech companies. GreenTech, the industry term for "green technologies", is taking on greater importance in the world in general, and the world of business in particular. It includes any technology that promotes a more efficient use and re-use of the earth's resources in industrial production and consumption. GreenTech products and services are designed to reduce or eliminate environmental impacts and improve operational performance, productivity, or efficiency while reducing costs, inputs, energy consumption, waste, or pollution. Although many companies within GreenTech industry sectors are very different, they share a common trait: all use new, innovative technology to create products and services that compete with existing products and services on price and performance while reducing impact on the environment.

About ProSep Inc.

ProSep Inc., formerly known as TORR Canada Inc., is dedicated to providing process solutions to the oil and gas industry. ProSep designs, develops, manufactures and commercializes technologies to separate oil, water and gas generated by oil and gas production. For more information, please visit www.prosepinc.com.
